

SEA Milan Airports implements board systems also on the follow me fleet service

After the project has seen the completion of the means BUS , Ambulift Push back and Milan Linate and Milan Malpensa, now also the service FOLLOW ME vehicles

the two airports will be set up with the platform monitoring board SELSAT provided by Selecta and Digitax in collaboration with Lanservice

It is a further integration in the completion of driving control and positioning of the entire fleet Airport that soon will expand on other means installing the device Digitax X -One Plus

Automation achieved enables the integrated management of the processes of handling media , the right to drive , the management of the anomalies with alarms and events sent to the leaders of the industry.

The system is now in the regime for over two years.
